

## Comment Summary

February 2021

Topic	Stakeholder Comment	MaineDOT Response
Construction	So, I hurd the details from your logic and as a General Contractor...being honest...you are out of your league. There is alot of criminal activity in funding projects in the state of Maine. As a Contractor everything has to be logical and honest. And I don't have a 35 dollar lic. Maine has a big problem with con artists that manipulate construction and the cost. Wake-up	<i>No response requested.</i>
Construction	Instead of obtaining personal info(again con artists maneuvers), tell the truth!!! It's easier	<i>No response requested.</i>
Construction, Street Closure	Primary concern is the closure of High St. If the project is to extend into the Fall of 2022 this will greatly effect the school bus transportation in the MSAD11 school district.	<i>No response requested.</i>
Street Closure	Will the water level be effected?	I would like to first thank you for participating in the virtual public meeting process for the West Gardiner, Gosline Bridge project. It is very helpful to MaineDOT to get as much feedback as possible for all of our projects. Through our hydraulic analysis of Cold Stream, we will be looking to install a designed structure that is wider, but shorter than the existing structure. This will provide a hydraulic opening that is overall larger than the existing structure, which will provide better control of higher water flows that occur through the area during spring runoff and other similar events. As such, we want to make sure that normal flows are not reduced to nothing through the structure, so we will be setting the elevation of the bottom of the new structure such that some ponding in the structure occurs in an effort to maintain water levels through the structure during the low water months. This should result in a couple feet of water in the structure at a minimum at all times in the final condition.
