

Topic	Stakeholder Comment	MaineDOT Response
Road/Design	I approve and support MaineDOT's Whitney Brook Bridge Project. The aspect that I love about MaineDOT's Whitney Brook Bridge Project is that the existing bridge will be replaced with one that is safer and up to current design standards.	Thank you for your comments.
Other, Construction, Road/Design	Type of bridge—the one that is most long-term and most flexible to future possible modifications. Detour—I think that the short term temporary bridge near the site would be least disruptive to the fewest local people versus the extended side-road disruption and long detour. The town will feel the effects for the duration of the project, so keeping that disruption to a minimum is important. Usage of the adjacent recreational park would be unpleasant in either case due to dust, noise and potential injury. Establishing a temporary recreational place (say at the nearby school/ church? property) would be a safer substitute than maintaining use. So I suggest the best bridge, the short local temporary bridge, and relocating the park temporarily. Thank you for making input possible. I am not local, but I do use this bridge whenever I drive north.	Thank you for your comments. We will certainly be taking the safety of the public seriously if it is determined to use the public park property as the location of a potential detour and will work with the town to address concerns.
