

Topic	Stakeholder Comment	MaineDOT Response
Construction, Schedule	With the millions to be spent why is their silence on detour road method to be used? Side bridge, one way with flaggers, or other method?	At this time MaineDOT sees construction maintaining at least alternating one way traffic on site. Ultimate traffic maintenance will be determined by the Contractor.
Construction, Schedule	That information would be helpful for commuters to know they'll need to add another 5 minutes to get to work, don't you think? Thank-you.	<i>No response requested.</i>
Construction, Environmental	Thank you	<i>No response requested.</i>
Construction	Very concerned about traffic impacts during construction. How long will the project be? Will there have to be a flagger and single lane traffic?	Thank you for your comments. Construction is expected to begin in the fall of 2022 and be complete by December of 2022 . Whether there are flaggers or a temporary traffic control light with one lane of traffic will be up to the contractor that is awarded the project.
